
Whole Slide Imaging Service

Empowering Pathology: Digital Precision in Every Slide

CytoVision
On-Demand Digital Pathology

www.mycytovision.com

Introducing digital pathology to your laboratory has never been easier.

Experience the future of pathology with our next-generation Whole Slide Imaging (WSI) Service, offering significant advantages for both practice and study—at no upfront cost.

Comprehensive Capture
Ensures complete imaging of entire slides, allowing pathologists to examine every detail without missing critical areas.

Integration into Pathological Reports
Enhances diagnostic quality with easily incorporated digital slides into reports.

Research and Publication
High-resolution digital images for research, easily archived and retrievable for scientific papers.

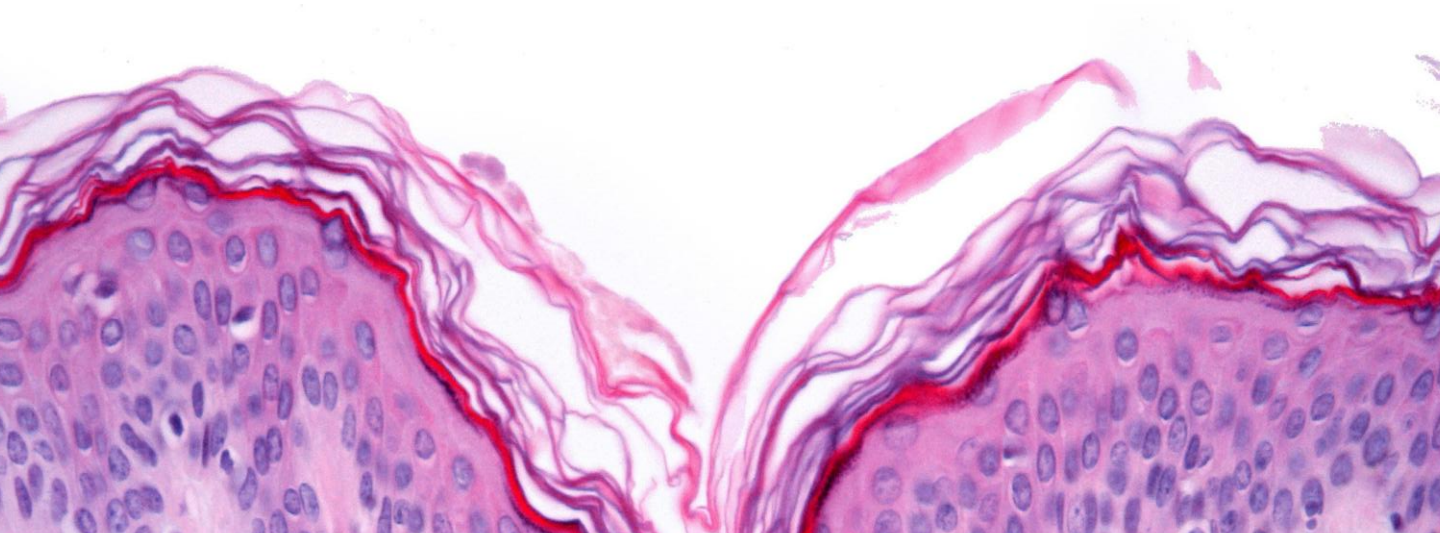
Standardization of Diagnoses
Promotes uniformity across institutions with calibrated digital images, minimizing variability.

Long-Term Storage
Digital slides maintain integrity over time, invaluable for long-term studies and free from physical degradation.

Integration with EMR
Links digital slides with Electronic Medical Records, streamlining patient data management and care.

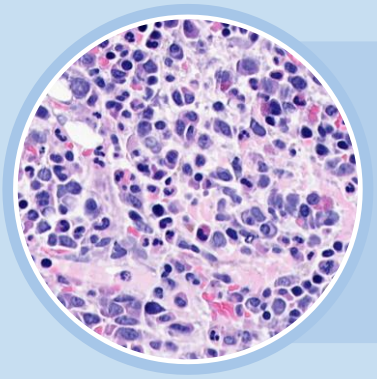
Remote Access and Collaboration
Enables pathologists and researchers to access and discuss slides remotely, ideal for collaborative projects and specialist consultations.

Educational Use
Provides an extensive resource for medical education, supporting teaching, exams, and self-study through easy sharing of images.



See the Whole Picture, Anytime, Anywhere!

Our Whole Slide Imaging (WSI) systems efficiently scan a diverse range of slide types for both histology and cytology, each tailored to meet specific diagnostic and research needs

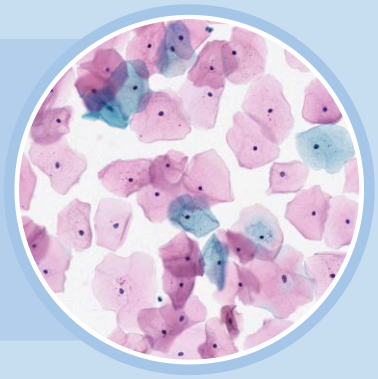


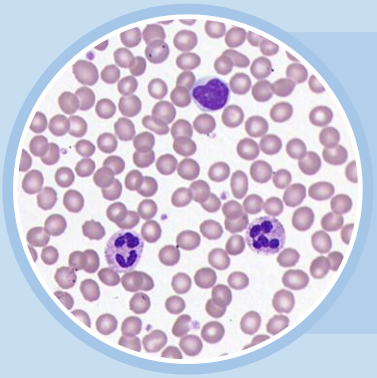
Histology

H&E Stain
Immunohistochemistry (IHC)
Silver Stain
Frozen Section

Cytology

Cervical Cytology (Pap Smear)
Fine Needle Aspirates (FNA)
Cutaneous cytology





Hematology

Peripheral Blood Smear (PBS)
Bone Marrow Aspirates
Cell Counts
Morphological Analysis

Tailored for Every Detail in Digital Pathology.

Our 'Customized Precision' approach tailors every digital pathology protocol to specific client needs, ensuring unmatched accuracy and detailed attention, perfectly suited for modern pathology demands.

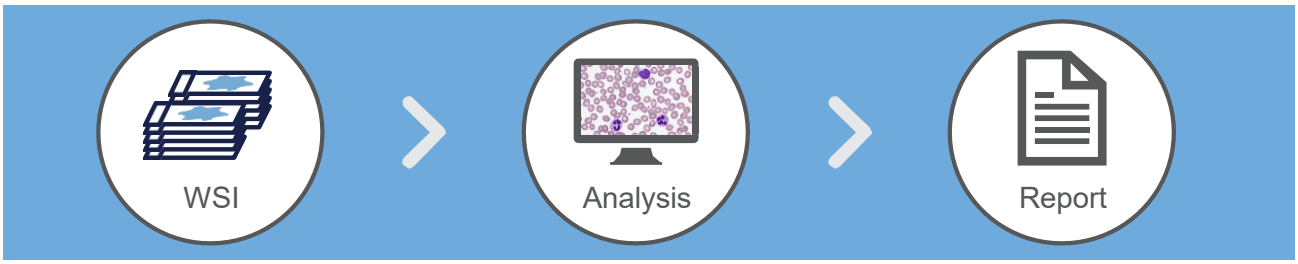
- **High-Throughput Scanning Capacity:** Capable of scanning more than 2000 slides per day, ideal for large-scale studies and projects requiring quick turnaround.
- **High-Quality Scan:** Delivers high-resolution scans at 20x and 40x, ensuring diagnostic-grade image quality for precise analyses.
- **Fast Turnaround Time:** Quick processing times from slide scanning to data delivery, crucial for time-sensitive diagnostic and research needs.
- **Malaysian Medical Device Authority (MDA) Certified:** Our WSI technologies are certified by the MDA affirming that it meets rigorous standards for producing diagnostic-grade images.
- **Robust Data Management System:** A secure and efficient system for viewing and managing large volumes of digital slides, with easy search and retrieval capabilities.
- **Expert Support and Consultation:** Access to experienced pathologists and technicians for technical support, interpretation assistance, and ensuring customer satisfaction.
- **Flexible Service Packages:** Offers a variety of service packages, from pay-per-slide to unlimited scanning plans, tailored to meet diverse budget and usage needs.

Cytovision EnvisionPath™

End-to-End Digital Pathology Solution

Our end-to-end digital pathology solution, the Cytovision EnvisionPath™, offers a seamless sample-to-report workflow. From initial whole-slide imaging analysis to the annotation of relevant cases, and concluding with a final report from board-certified cytologists, pathologists, and/or hematologists, we ensure a simplified and streamlined process. This system requires no specialized equipment installation or informatics expertise, allowing you to benefit from the efficiency and cost-effectiveness of digital pathology with ease.

EnvisionPath™ Digital Pathology Solutions Workflow



We begin by collecting the physical slides directly from you. Once we receive the slides, they are scanned using state-of-the-art WSI scanners.

All images are readily available for download and viewing via our online viewer, accessible from any web-enabled device. The viewer facilitates easy navigation, zooming, and detailed analysis of the images, enhancing both collaboration and further study.

Finally, board-certified cytologists, pathologists, and/or hematologists meticulously prepare final reports, ensuring accurate interpretations are integrated into comprehensive, diagnostic-quality reports.
